

AHERA COMPLIANCE NOTIFICATION

July 17, 2024

Zach Dehaemers
Facilities Manager, St, Vincent Ferrer
7754 Montgomery Road
Cincinnati OH, 45236

Dear Parents, Teacher, Building Occupants and Employee Organizations:

In the past, Asbestos was used extensively in building materials because of its exceptional insulation, sound absorbing, and fire retardant capabilities. Virtually, any building constructed before the late 1970s contained some form of asbestos. Intact and undisturbed, asbestos materials generally do not pose a health risk to building occupants. Risk levels increase when damage, deterioration over time or neglect causes asbestos fibers to become released into the air. These fibers can lead to chronic health problems in some individuals if inhaled.

In 1986, the United States Congress passed the Asbestos Hazard Emergency Response Act (AHERA) which required (and continues to require) schools to be inspected to identify any asbestos-containing building materials in buildings owned, operated, or otherwise used for school purposes. During these original inspections, materials were located, sampled, quantified and ranked according to the hazard observed. Every three years, that same regulation requires St. Vincent Ferrer Church and School to have a reinspection of the materials previously identified to determine whether the condition of those materials have changed and to make recommendations on managing or removing the asbestos-containing building materials. The date of the last re-inspection was June 18, 2024. Atlas Technical Consultants LLC (Atlas) of Cincinnati, Ohio is scheduled to perform this re-inspection during the month of June 2027.

Further, AHERA required that an initial Management Plan be generated and active for each school building by July 1989. The plan is a compilation of all inspection data generated, required compliance notification, abatement projects, training of employees and short-term workers and six month periodic surveillance events. Saint Vincent Ferrer Church and School developed a plan as required. This document is available for public review and is located in the parish offices. The school has a designated person who is responsible for AHERA compliance work. This individual is Zach Dehaemers and he can be contacted at 513-791-9030.

During the past year, asbestos-containing materials were not removed from any areas of the school building.

It is the intention of Saint Vincent Ferrer Church and School to comply with all federal and state regulations controlling asbestos and to take whatever steps are necessary to ensure students and employees a safe and healthy environment in which to learn and work. Should you have additional questions or comments concerning asbestos, the School's Management Plan or any other safety and health need, please do not hesitate to contact our office.

We look forward to a successful, safe, and rewarding school year.

Sincerely,
Kathy Abele, Business Manager - St. Paul the Apostle Family of Parishes, St. Vincent Ferrer Church
